

Update Release Notes for version 5.35 - June 2019

Please be sure to clear the cache and cookies in your internet browser.

New Features

- OpSuite Point of Sale Receipt Builder
 - The receipt builder will allow OpSuite and OpSuite Point-of-Sale users to customize printed receipts. Customization includes: store information, prices (standard and sale), taxes and even the image at the top of the receipt (logo). A mock-up of the receipt will display as the user changes the information to view before assigning to store locations.

- Point of Sale Device Groups can be created to apply the same settings to a set of devices within a location.
- Point of Sale Orders (Work Order, Special Order, Layaway)
 - Backorders: Out of stock items can be placed on backorder for a customer. The items can then be added to a purchase order in OpSuite to be fulfilled.

- Work Orders, Special Orders and Layaways: Items can be added to a work order, a deposit taken, payments can be made over time, and final or partial pick up of the work order can be completed. Items on a work order are marked as Committed quantities in inventory until fulfilled. Deposits can be modified in OpSuite to suite the location's needs.

- Employees
 - OpSuite Point-of-Sale language can be selected and saved for each individual employee based on their language preference (English, French and Spanish).
 - Analytics reports can be assigned to an Employee's Role (Cashier, Manager, Administrator, etc), to limit the data the employee can view.
 - Employees can be granted Regular or Restricted access to assigned analytic reports.
- Photos of customers can be uploaded to OpSuite through the customer record.
- Merchandising (Purchase Orders, Transfer Orders and Receivers)
 - As items are added or modified on an order, a new easy way to view the items that have been added or modified is available. Simply click the "added" or "modified" link at the top right of the order grid, and the view will be changed to show only those items. Click Clear, and all items will be displayed again. Saving the order clears these links.
 - Columns in the Add Item table of Item Distribution can now be sorted and searched.
 - Inter-store transfers now notify the user if an item does not exist at the receiving location; the user can choose to remove the item from the transfer or add it to the receiving location.

Bug Fixes and Updates

- Search functions across OpSuite have been optimized to return results faster and more precise. The search is now executed by selecting the SEARCH button or hitting return on your keyboard.
- Labels
 - Avery Labels 5167 and 5162 have been added to the available label sizes.
 - 2"x1" continuous label in a custom layout; contains only Item Description, Price (sale or regular), barcode, and sku.
 - When selecting to print a barcode on the label, the user can select sku or barcode number.
- When moving from page to page on an order, the data grid will be set to the top for each page.
- Verbiage changes in OpSuite include Vouchers to Receivers in Company Setup, and the file type of Tab File to TXT (Tab File).
- Companies from outside the United States can now enter a valid Zip Code for their country in Company Setup.
- Inventory
 - Item Type (Standard, Voucher, Coupon, etc) can no longer be changed once the item has been saved.
 - The max size for an item image is now 28MB, 558px by 458px; Accepted file types are JPEG, PNG, GIF, Bitmap and Tiff.
 - Item Margins are not consistent between View and Edit modes.
 - Extended Descriptions that exceed the page width are now wrapping to a separate line on the page.
- Merchandising
 - Duplicate items will no longer appear in the user interface of the purchasing table.
 - When fullscreen is used on the Order Details section, messages will now appear over the page.
 - Place and Issue All will now properly set the status as closed, as long as all items were received.

Analytic Reports

The following reports have been added to the Analytics Reporting
